
3-Step Vetting Checklist

How to evaluate AI tools before making recommendations

Before you put a tool into a client's AI Roadmap, it must pass these three fundamental tests. If a tool fails even one of these, proceed with extreme caution or look for an alternative.

STEP 1: Credibility Check

Does it have credible reviews on YouTube or G2?

- ☐ Look for independent reviews, not just sponsored content. A tool with no footprint on major review platforms like G2, Capterra, or YouTube is a risk for a business setup.

STEP 2: The "Hands-On" Test

Does it have a free trial or free tier you can test?

- ☐ Never recommend a tool you haven't touched. You need to verify the user interface is intuitive and that the features actually work as advertised before presenting it as a solution.

STEP 3: Economic Alignment

Does the pricing make sense for a business this size?

- ☐ A \$200/month tool might be an easy "yes" for a 50-person agency, but a dealbreaker for a solo founder. Ensure the tool's ROI outweighs its cost for your specific client's budget.
