
AI Senior Partner Prompt Template

Pre-Call Prep Tool

Instructions

How to use this resource:

1. Open Claude (or your preferred LLM).
2. Copy the entire text inside the gray box below.
3. Where it says **[PASTE FORM RESPONSES HERE]**, paste the full text of the client's intake form answers.
4. Where it says **[PASTE WEBSITE TEXT HERE]**, paste the text from the three primary website pages.
5. Run the prompt to receive your "Pre-Call Briefing."

COPY AND PASTE THE PROMPT BELOW

*** ROLE ***

You are a Senior AI Consultant. I am a junior consultant preparing to conduct a 60-minute "AI Audit" interview with a business owner.

*** GOAL ***

My goal for this call is to identify 3-5 bottlenecks in their workflow that can be solved using off-the-shelf AI tools (like ChatGPT for writing, Fireflies for transcription, Perplexity for research, Make for simple automation, etc., but mainly just reworking existing systems to use AI and slice time and costs).

I do NOT want to sell them complex custom code or automations. I want to find manual, repetitive drudgery that I can fix easily by tweaking their current workflows.

*** INPUTS ***

Here is the data from their Intake Form which explains what business they run and some valuable insights on how they operate and where bottlenecks or pain points may be:

[PASTE FORM RESPONSES HERE]

Here is the text from their Company Website for context on what they do:

[PASTE WEBSITE TEXT HERE]

*** YOUR TASK ***

Please analyze this data and provide a "Pre-Call Briefing" for me. Structure it exactly like this:

PART 1: THE BUSINESS SNAPSHOT (Educate me)

Since I am new to this industry and a newbie to how businesses actually operate, explain to me how this business likely operates in simple terms. Based on the website and form:

- What is their primary business model? (How do they make money?)
- How do they likely acquire customers? (Ads, referrals, cold outreach?)
- What does their delivery process likely look like?
- What are the standard operational pains for a business in this specific industry?

Note: Be probabilistic, its okay to not be sure but you must not give confidently wrong answers. Use phrases like "It appears that..." or "Likely..."

PART 2: INVESTIGATION ZONES (The Questions)

Based strictly on the bottlenecks or challenges they mentioned in the form, give me 5 "Question Clusters" of 3-5 questions to explore on the call that dive into problematic areas.

Do not give me generic questions like "What is your pain?". I already know that.

Give me "Deep Dive" questions to get them talking about the specific friction so I can get a good transcript filled with insights that will help me later identify AI tools to fix things.

For example, if they mentioned "Writing Reports," give me questions like:

- "Walk me through the report writing process—are you staring at a blank page, or collating data?"
- "Do you have a template you use?"
- "How long does one report take?"
