
The Investigator Prompt

Post-Audit Synthesis Tool

Instructions

How to use this resource:

1. Copy the prompt below and paste it into your AI. We recommend using **Claude** for better output.
2. Fill in each section with your actual data.
3. AI handles large text inputs well, so you don't need to summarize or cut the transcript.
4. The more complete your inputs, the sharper the *Investigation Zones* output will be.

COPY AND PASTE THE PROMPT BELOW

CONTEXT & GOAL

I am an AI Consultant conducting a "Lightweight Tools Audit" for a small-to-medium business.

My goal is NOT to propose complex custom software or a 6-month digital transformation.

My goal is to identify 3-5 "Low-Hanging Fruit" opportunities where off-the-shelf AI tools (like ChatGPT Team, Fireflies, Perplexity, Midjourney, simple Automations) can save them time immediately.

I have already conducted the audit interview. Now, I need you to synthesize all the data I have collected to help me prepare my final report.

THE DATA SOURCES

I am pasting 4 inputs below:

1. THE INTAKE FORM (Initial data provided by client):

[PASTE TEXT HERE]

2. THE WEBSITE TEXT (Public description of business):

[PASTE TEXT HERE]

3. THE PRE-CALL REPORT (My initial hypothesis prior to the audit call):

[PASTE TEXT HERE]

4. THE AUDIT TRANSCRIPT (The actual conversation/truth):

[PASTE TEXT HERE]

YOUR TASK

Please analyze this data and output a briefing in two distinct parts.

PART 1: THE BUSINESS TRUTH

Synthesize the transcript and form data to explain how this business ACTUALLY operates (which might differ from their website).

- The Revenue Engine: How do they actually make money?
- The Customer Journey: Briefly map the reality of how a lead becomes a customer.
- The Team Structure: Who is actually doing the work?

PART 2: INVESTIGATION ZONES

Identify 5-10 specific areas where I should focus my research for AI tools.

For each zone, provide:

1. THE BOTTLENECK: What is the specific manual task slowing them down?
2. THE EVIDENCE: Quote the client directly from the transcript regarding the pain.
3. THE MATH: Highlight the ROI potential (hours, team size, or costs mentioned).
4. RESEARCH DIRECTION: Tell me what category of tools to investigate - not a specific tool. (e.g., "Investigate AI Voice Agents" or "Research AI Knowledge Base tools").

CONSTRAINTS

- Stick to "Off-the-Shelf" opportunities. No custom coding suggestions.
- Be specific with the data. If the transcript has a number, use it.
