
Practice File: Case Study

Mock Intake Data: Apex Roofing & Restoration

Use the following mock data to practice your diagnostic process. Look for the "hidden" time-wasters and identifies where AI automation could provide the biggest ROI for this founder.

SECTION 1 & 2: THE BASICS + WHAT YOU DO

Business Context

1. Name

Mike Reynolds

2. Email

mike@apexroofingrestoration.com

3. Business Name

Apex Roofing & Restoration

4. Industry

Construction (Residential Roofing)

5. Team Size

6-15 employees (4 office staff, 8 field crew)

6. One-sentence pitch

We provide high-quality residential roof replacements and emergency storm damage repairs.

7. Typical Customer

Suburban homeowners (aged 35-65) whose roofs are 15+ years old or have recent hail damage.

8. Customer Acquisition

Referrals / Word of mouth, Google search / SEO, Paid ads (local service ads)

SECTION 3: THE FOUNDER'S TIME

The Bottlenecks

9. Top 3 Time-Eating Tasks

1. Reviewing site photos and drone footage to verify measurements for estimates.
2. Chasing down vendors for material delivery confirmations.
3. Manually drafting custom project proposals for high-end insurance claims.

10. The Magic Wand Task

I would eliminate the back-and-forth between our sales guys and the office. If the data from the initial site visit could just "turn into" a draft estimate automatically, I'd save a massive amount of stress.

SECTION 4 & 5: MARKETING + SALES

The Growth Engine

11. Marketing Challenge

Content creation is a nightmare. I know we need to show "before and after" photos on social media to build trust, but by the time we finish a job, we're already onto the next one and forget to post.

12. Sales Structure

Me + 2 dedicated sales reps.

13. Sales Issue

Leads go cold before we follow up. If a storm hits, we get 50 calls in a day and we simply can't get back to everyone fast enough. By the time we call back on day 3, they've already hired a competitor.

SECTION 6 & 7: OPS + SUPPORT

The Daily Grind

14. Delivery Bottleneck

Coordination. Getting the right materials to the right job site at the exact time the crew arrives. If the shingles are late, I'm paying a crew of 8 to sit on their hands.

15. Unsolved Problem

Communication gaps between sales and the site foreman. Sales promises a "clean yard" or "extra flashing," but that info often gets lost in the hand-off.

16. Support Headache

Clients calling every day for status updates. "When is the permit ready?" "What time are you coming tomorrow?" It's the same 5 questions over and over.

SECTION 8: AI EXPERIENCE + SUCCESS

Expectations

17. AI Experience

Yes, but not consistently. I've used ChatGPT to fix a few angry emails, but nothing more.

18. Specific Tools Tried

ChatGPT (Free version).

19. What Success Looks Like

Getting my weekends back. Right now, I spend Saturday and Sunday doing the paperwork I couldn't get to during the week. I want to scale to 3 crews without having to hire another office admin.

20. Specific Focus for Audit

I want you to look at how we handle a new lead coming in from the website. It feels like we're leaking money there.
