

# Practice File: Complete Audit Data

*Case Study: Apex Roofing & Restoration*

Use the following data to find the gold and get direction on which AI opportunities you can address.

## DATA SOURCE 1: FULL INTAKE FORM RESPONSES

### INTAKE FORM DATA

1. **Name:** Mike Reynolds    2. **Email:** mike@apexroofingrestoration.com
3. **Business Name:** Apex Roofing & Restoration    4. **Industry:** Construction
5. **Team Size:** 12 (4 office, 8 field crew)
6. **What do you sell?** High-end residential roof replacements and storm restoration services.
7. **Typical Customer:** Homeowners (35-65) in affluent suburbs with roofs older than 15 years.
8. **Lead Sources:** 60% Word of Mouth, 30% Google Ads, 10% Social Media.
9. **Founder's Time (Top 3):**
  1. Reviewing drone footage/site photos to double-check sales reps' measurements.
  2. Reviewing complex insurance claim supplements before they are sent.
  3. Interviewing and onboarding new subcontractors during peak storm seasons.
10. **Magic Wand:** "If I didn't have to manually verify every single shingle count on every estimate, I'd have my Sundays back. Currently, I spend 4-5 hours every Sunday in the office doing this."
11. **Marketing Challenge:** "I have thousands of 'before and after' photos on my phone and the company server, but they never make it to Instagram because the process of downloading, editing, and captioning is too slow."
12. **Sales Issue:** "Speed to lead. When a storm hits, we get dozens of calls. If we don't respond in 15 minutes, we lose the lead. My office manager Sarah is overwhelmed during these periods."
13. **Ops/Delivery Bottleneck:** "Material coordination. Sarah spends 2 hours a day calling suppliers to confirm delivery windows. If materials are late, the crew sits idle at \$400/hr."

### WEBSITE COPY

#### [HOME PAGE]

Apex Roofing & Restoration: The Gold Standard in Storm Recovery. Serving the Tri-State area for over 15 years. We don't just fix roofs; we restore your peace of mind. Get a free, drone-assisted roof inspection today. Emergency 24/7 tarping available.

#### [ABOUT US]

Founded by Mike Reynolds, a third-generation builder, Apex was built on a simple promise: do it right the first time. We've grown from a one-man operation to a full-scale restoration firm. Our team of FAA-licensed drone pilots and HAAG-certified inspectors ensures that no detail is missed. We treat every home like it's our mother's.

#### [SERVICES PAGE]

**Residential Roofing:** Specialists in Asphalt Shingles, Standing Seam Metal, and Spanish Tile.

**Storm Restoration:** Full-service handling of hail and wind damage claims. We work directly with your insurance adjuster to ensure you get every penny you're owed for the rebuild.

**Gutter & Siding:** Complete exterior solutions to protect your foundation and curb appeal.

**Commercial Services:** TPO and flat roof maintenance for local businesses.

## DATA SOURCE 3: AI SENIOR PARTNER STRATEGY REPORT

### HYPOTHESIS REPORT (PRE-CALL)

**Primary Business Model:** High-ticket (\$15k-\$40k) construction services with a heavy reliance on insurance lead flow. High margins but high operational complexity during "surge" periods.

**Potential Bottlenecks Identified:**

- **Data Silos:** Sales reps have data on phones; office has data in CRM. Hand-off is manual.
- **Vision Deficit:** Drone footage is used for "cool factor" but not currently automated for data extraction.
- **Coordination Lag:** Supplier communication is via phone/voice, leading to no paper trail and "Sarah's phone" being a single point of failure.

**Question Clusters for Audit:**

- "Walk me through the path of a drone photo—from the sky to the final estimate."
- "When Sarah is calling suppliers, what specific info is she looking for?"

## DATA SOURCE 4: AUDIT CALL TRANSCRIPT (FULL SESSION)

### TRANSCRIPT: MIKE REYNOLDS + CONSULTANT

CONSULTANT: Mike, thanks for jumping on. I've spent some time with your form and I'm really interested in this "Storm Rush" dynamic. You mentioned that speed is everything when a hail storm hits Tri-State. Walk me through what happens in the office the morning after a storm.

MIKE: Oh man, it's controlled chaos. Or sometimes just chaos. My phone starts buzzing at 6:00 AM. By 8:00 AM, Sarah—she's my office manager—has a stack of 20 sticky notes on her desk. The problem is, she's also trying to coordinate the crews that are already out on jobs. If she's on the phone with a homeowner who's panicked about a leak, she's missing three other calls.

CONSULTANT: What happens to those missed calls? Do they leave voicemails?

MIKE: Some do. But honestly? If they're calling us, they're calling three other guys. If we don't pick up or call back within 10-15 minutes, they've already booked an inspection with the next company on Google. I'd say during a peak week, we miss at least 15 solid leads.

CONSULTANT: Let's do some quick math there. 15 leads... what's your average job size?

MIKE: About \$18,000. We close roughly 30% of those inspections. So, 15 leads is 5 jobs. That's \$90,000 in revenue we just... blink, and it's gone. Every single week there's a storm. It kills me.

CONSULTANT: I want to talk about the "Sunday Review." You mentioned you spend your entire Sunday double-checking photos. Why can't the sales reps just handle that?

MIKE: They try! Josh and Pete are great guys, but they're "sales" guys. They're on a roof, it's 95 degrees, they're sweating, and they need to get to their next appointment. They fly the drone, snap 50 photos, and then they have to manually count shingle squares and identifying "accessories"—like flashing, vents, pipe boots. If they miss two pipe boots and a length of valley flashing on the estimate, and we send that to the insurance company... the adjuster isn't going to tell us. They'll just approve the lower amount. If I don't catch it, we lose \$1,500 to \$2,000 in profit on that job.

CONSULTANT: So you're literally counting vents on a screen for 5 hours?

MIKE: Yep. Sunday morning, pot of coffee, opening Google Drive folders. I'm looking at high-res drone shots, zooming in, checking it against the Xactimate draft. It's the only

way I know the numbers are right. I want to scale to 3 or 4 crews, but I can't imagine doing this for 30 jobs a week. I'd never see my kids.

CONSULTANT: Let's pivot to Sarah and the suppliers. You mentioned she spends 2 hours a day on "Material Coordination." What does that look like exactly?

MIKE: It's a mess. We order shingles from ABC Supply. They say they'll be there Tuesday morning. Tuesday at 9:00 AM, my foreman, Raul, calls Sarah: "Where's the shingles? We're standing on the lawn." Sarah calls the supplier. They put her on hold. "Oh, the driver is at the yard, he'll be there in an hour." An hour goes by, nothing. Sarah is calling back, getting different stories. Meanwhile, I'm paying a crew of 8 guys \$400 an hour total to sit in their trucks. If that truck is 2 hours late, that's \$800 down the drain. It happens at least twice a month per crew.

CONSULTANT: Does the supplier provide any digital tracking? Like a UPS link?

MIKE: They have an "app," but it's garbage. Nobody uses it. They just call. Sarah's phone is like a 1980s switchboard. It's the bottleneck for everything.

CONSULTANT: One last thing—the "Insurance Supplements." You mentioned \$140k in a logjam. Tell me about that.

MIKE: Oh, this is the worst part. When we find extra damage during a tear-off, we have to "supplement" the claim. We have to write these formal letters to the adjusters explaining WHY we need more money, citing building codes and manufacturer requirements. Josh and Pete hate writing. They have the photos of the rotted wood, but the actual "write-up" sits in their drafts for weeks. Right now, we have about \$140,000 in approved work that we haven't even invoiced because the supplement letters aren't finished.

CONSULTANT: So the money is there, but the "writing" is the wall?

MIKE: Exactly. If I could just say "Hey, here's a photo of the rot and the code requirement," and a professional letter just appeared... we'd have that \$140k in the bank in ten days.

CONSULTANT: Mike, this is pure gold. I've got enough to start testing some tools. Let's look at Thursday for the Roadmap review...
